

ScriptLens — Error Injection Cheat Sheet

Write normally. Plant mistakes. Log everything.

What to send back

1. **Script** — .fountain, .pdf, or .txt (standard screenplay format)
2. **Error Log** — one file per script (template provided)

11 mistake types (pick what fits the story)

#	Plant this mistake	Example
1	Dead → alive	Killed off, later walks in with no valid reveal
2	Role clash	Surgeon in Act 1, lawyer in Act 2 — same person
3	Prop — wrong owner	Elena's ledger, then Marcus has it, no transfer scene
4	Prop — destroyed but back	Burns the letter, then reads the same letter
5	Prop — lost but back	Drops the key, then has the key again, no recovery
6	Injury — wrong side	Shot in the left arm, later wound on the right arm
7	Injury — vanishes	Unconscious, then running the same day, no hospital
8	Relationship — impossible	Siblings, later married — same two people
9	Relationship — parent flip	He is her father, later she is his mother
10	Location clash	Same place: 'abandoned for years' vs 'busy all day'
11	World rule broken	'The machine cannot reach the future', later it does

World rules (new): state the rule plainly as "[Thing] cannot [do X]" (a concrete subject — a machine, a serum, a person), then later show it doing X with no explanation. Conditional rules ("can only when...") and blanket rules ("no one can...") are not auto-detected, so avoid relying on those.

Note: calendar / day-of-week timeline slips ("Monday...yesterday was Friday") are **no longer auto-detected** — please do not plant those as test errors.

Before you submit

- Reads like a **production draft**, not a test file
- Every planted mistake is in the **Error Log**
- **Establishing scene + breaking scene** filled in for each error
- Errors **spread** across the script (not all in one scene)
- Scene index lists **every** scene heading
- No labels in the script ("CONTINUITY ERROR HERE")

Do NOT log as errors

Enemies → friends · breakups · divorce · explained fake deaths · flashbacks · dreams · on-page handoffs (gives / hands / steals / finds) · calendar slips

Error Log (minimum per entry)

```
error_number: 1
category: "Prop - wrong owner"
establishing_scene: 4
contradicting_scene: 7
characters_involved: ["ELENA", "MARCUS"]
objects_involved: ["silver key"]
establishing_moment: "ELENA picks up the silver key."
contradicting_moment: "MARCUS has the silver key."
how_a_reader_notices: "No scene shows the key changing hands."
writer_intent: deliberate
```
